

Bare-metal ISO Installer

From Proxmox VE

Introduction

Proxmox VE installs the complete operating system and management tools in 3 to 5 minutes (depends on the used hardware).

"Bare-metal" means that you start from a empty server - there is no need to install a base operation system.

Including the following:

- Complete operating system (Debian 64-bit)
- Partition the hard drive with LVM2
- Proxmox VE Kernel with OpenVZ and KVM support
- Backup/Restore tools
- Web based management interface
- Proxmox uses LVM - See backup and restore of LVM data.

Please note, the complete server is used and all existing data is removed.

See Installation for more details.
